 COURSES

 WORKSHOPS

A person aged above 18 who rides/drives a vehicle.

User Validation

1) Have you come across or faced any problem related to accident ?

Two people lost their lives in an accident .There were no people around to help and no medical help was provided at that time . Because of excess amount of blood loss both of them could not survive.

2) Do you know anyone who does?

yes

User Journey Story

The Product will be based on IOT that can sense the force and generate sound alert in a bike so that the people nearby could hear the sound and reach the victim to help. if there no people then we will set a time limit so that, if the user is not seriously injured , then they can turn off the sensor using mobile application and this way the alert will not generate for the police station and hospital.

This is a one of the way users life will be safe and impacted because every life matters.
